SUMMARY

Aspiring Software Development Engineer and Computer Science graduate with hands-on experience in Python, SQL, FastAPI, REST APIs, SQLite, Git, automated testing, and machine learning. Built modular database-backed applications, deployed backend APIs, and ML solutions with a focus on practical problem solving, clean architecture, and reliable software.

EDUCATION

B.Tech - Computer Science and Engineering | 2022 - 2026

Siddharth Institute of Engineering and Technology, Puttur, Andhra Pradesh | CGPA: 8.42/10

Coursework: Data Structures, Algorithms, OOP, Database Systems, Machine Learning

EXPERIENCE

Machine Learning Intern | Unified Mentor | Sep 2025 - Dec 2025

- Developed a vehicle price prediction model using Python and Random Forest on a dataset of about 1,000 vehicle records.
- Performed exploratory analysis, missing-value handling, categorical one-hot encoding, and an 80/20 train-test split.
- Used GridSearchCV with 3-fold cross-validation for hyperparameter tuning; the selected model achieved $R^2 \approx 0.83$ and RMSE $\approx \$6,603$ on the held-out test set.

Machine Learning Intern | Skill Intern | May 2025 - Jun 2025

- Developed a CNN-based handwritten digit classification model using TensorFlow/Keras and the MNIST dataset in Google Colab.
- Applied image reshaping, pixel normalization, one-hot label encoding, convolution/pooling layers, and multi-class evaluation.
- Achieved approximately 99.4% test accuracy and evaluated performance using precision, recall, and F1-score.

PROJECTS

Employee & Inventory Management System | Python, SQLite, SQL, unittest | Jul 2026 - Aug 2026

- Built a modular CLI system for employee/product CRUD, search, stock-in/out, transaction history, validation, and Admin/Staff role-based access.
- Implemented authentication, parameterized SQL, transactional stock operations with rollback handling, SQL reports, and automated unit tests.

URL Shortener API | Python, FastAPI, SQLite, REST API | 2026

- Built and deployed a REST API for creating, redirecting, updating, deleting, and listing shortened URLs with duplicate-URL handling, validation, click tracking, and statistics.
- Structured the application into routes, services, models, database, and utility modules; added automated API tests and deployed the service on Render.

Coronary Artery Disease Prediction using Hybrid Ensemble Learning | Python, scikit-learn, LightGBM | Jan 2026 - Apr 2026

- Developed a hybrid ensemble using Logistic Regression, Random Forest, and LightGBM for coronary artery disease classification.
- Evaluated the model using accuracy, precision, recall, F1-score, and ROC-AUC.

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL

Frontend: HTML, CSS, Bootstrap

Backend: FastAPI, REST APIs

Databases: SQLite, MySQL

Core CS: Data Structures & Algorithms, OOP, Database Systems

Testing: unittest, unittest.mock

Data & ML: Pandas, NumPy, scikit-learn, LightGBM, TensorFlow/Keras, Matplotlib, Seaborn

Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

CERTIFICATIONS

- The Joy of Computing Using Python | NPTEL | 12-week course | 79%
- Python for Data Science Project | IBM / edX

ADDITIONAL INFORMATION

Languages: English (Fluent), Telugu (Native), Hindi (Conversational) | Interests: Software Development, Problem Solving, Data Structures & Algorithms, Machine Learning
